Summary

Product Engineer specializing in frontend systems, UI/UX architecture, and real-time digital platforms. Experienced in designing and building scalable, workflow-driven applications for government and enterprise environments with high reliability and structured data requirements. Strong background in system design, design systems, and cross-functional engineering, focused on translating complex operational requirements into intuitive, high-performance user experiences.

Work Experience

Product Engineer & UI/UX Designer

RSBoPP

2023-2026

- Engineered responsive, role-based user interfaces aligned with enterprise product and system requirements
- Designed and implemented scalable UI component systems for data-heavy dashboards and structured workflows
- Translated complex business logic into functional and maintainable frontend systems in collaboration with cross-functional teams
- Improved usability and consistency across enterprise dashboards by refining interaction flows and layout structures
- Participated in iterative design and development cycles to refine user experience based on user feedback

Product Engineer

The National Assembly

2022-2023

- Designed structured and accessible interfaces for legislative and governance-related digital systems
- Contributed to development of secure and maintainable applications supporting internal operational workflows
- Collaborated with stakeholders to translate complex administrative processes into usable software

Frontend Engineer/ UI/UX Design

Coway

2021- 2022 (Remote)

- Developed responsive and user-focused frontend interfaces from detailed UI/UX specifications
- Translated design systems into functional React-based components with emphasis on usability and consistency.
- Collaborated with design and engineering teams to ensure smooth integration of user experience principles into production builds

Frontend Engineer

Trefoil Network

2019- 2021 (Remote)

- Built and maintained scalable frontend applications focused on performance and usability
- Developed reusable UI components using component-based architecture principles
- Integrated REST APIs to enable seamless data-driven user interfaces
- Collaborated with backend and product teams to deliver functional, responsive web applications
- Improved maintainability and structure of frontend systems across multiple projects

Volunteer Experience

Volunteer Instructor

Aitech

Remote

- Taught design systems and foundational software engineering concepts
- Mentored students in system thinking and UI-to-code workflows
- Guided learners in applying structured design principles to real-world development projects.

Projects

BioTapApp

Biotap Services | biotapapp.com

- Designed and developed product identity and end-to-end UI/UX system for a fintech biometric payment application
- Built design systems using Figma and Photoshop to ensure consistency across user flows.
- Designed biometric onboarding experience focused on trust, security, and usability.
- Conducted real-world usability testing in public environments to evaluate offline payment interactions
- Iteratively improved prototype flows based on user behavior and feedback
- Created low-to-mid fidelity prototypes to simulate biometric authentication workflows

E-Procurement

PMIS | pmis.rsboop.rv.gov.ng

- Contributed to an enterprise e-procurement platform supporting 10,000+ active users including vendors and procurement officers
- Designed structured UI systems for role-based dashboards using Material UI (MUI)
- Implemented real-time communication features using WebSocket for bidding, approvals, and negotiations
- Improved system usability by ensuring consistency in data-heavy interface layouts and workflows
- Supported development of scalable, government-grade workflow architecture for structured operations
- Improved workflow clarity and real-time coordination across procurement processes through structured UI and communication systems

Education

Zenith University

BBA – Business Information Systems

2014 | Accra, Ghana

BlueCrest University

BSc Information Technology

2017 | Accra, Ghana

Certifications

Google UX Design

Google

Responsive Web Design

FreeCodeCamp

Skills

Core Engineering

React • TypeScript • JavaScript • Node.js • REST APIs

Frontend Systems

Next.js • Redux • Material UI • WebSockets

Design

Figma • UX Design • Design Systems • Prototyping

Testing & Tools

Jest • React Testing Library • Git • Agile
